Manager's Commentary

May was a more favourable month for risk assets compared to April, with industrial commodities and mainstream equities performing well despite higher valuations and geopolitical concerns.

The U.S. economic backdrop remained robust, with the Federal Reserve holding interest rates steady and Consumer Prices Inflation lower than expected at 3.4%. Treasury yields stayed above 4%, but liquidity improved as the Treasury issued more bills. The Fed's Quantitative Tightening will reduce to $25 billion per month starting from June, supporting liquidity for 2024. Growth-oriented stocks, particularly in technology, performed well, with Nvidia's rapid growth making it larger than the entire German stock market.

While market positivity prevails, risks persist. When debt levels become uncomfortable for markets, government bond yields rise to compensate for higher capital repayment risks, effectively increasing interest rates. This impacts collateral such as real estate and other asset classes used for liability matching, posing challenges for banks, as seen with Silicon Valley Bank last year. The UK experienced similar issues under Mrs. Truss, with volatile Gilt yields until the Bank of England intervened. Europe's economic activity rebounded, particularly in Germany, with GDP growth and the Eurozone Purchasing Managers Index improving. Despite German inflation rising slightly to 2.4%, we expect ECB President Christine Lagarde to announce an interest rate cut in June, likely before the Federal Reserve.

In the UK, equities surged from a low base, while the Bank of England hinted at future rate cuts despite holding steady. UK inflation dipped to 2.3%, lower than the US and Eurozone. Gilt yields rose post the July 4th General Election announcement, anticipating a potential Labour government. In Japan, economic growth persisted, aided by a weaker Yen and revised Bank of Japan policies, with MOF interventions to stabilize currency. Japanese inflation climbed to 2.6%, accompanied by higher wage settlements. Industrial metals, notably copper and silver, saw robust performance in May, alongside revaluations in gold, lithium, and uranium, amidst global reflation and rising demand. The sustainable energy and global technology funds performed strongly, while healthcare and Emerging market funds lagged. Dynamic bond fund yielded positive results for the month whilst long duration remains volatile. Geopolitical tensions persisted, with conflicts in Ukraine and Gaza, and escalated military activity between Taiwan and China, influencing market movements as the US election drew closer.

Portfolio changes included profit-taking in Japan and Europe, shorter duration in fixed income, and trimming emerging markets for a focus on US holdings. Overall, we are good shape year-to-date with performance and risk aligned and valuations moving steadily higher in a controlled manner.
